

Customer

Eastbourne Electrical LLP

Project

Eastbourne District General Hospital

Duration

4 Weeks

EDGH - Friston Ward was looking very tired Eastbourne Electrical were asked to update the electrical services as well as the lighting.

ALD were approached to come up with a design to re-light the six bed wards, communal areas and single occupancy rooms, this had a tight schedule and had to be finalised within a four week period.

Within our design we had to incorporate lighting controls, to save time on the installation and to save the containment from being disturbed. We opted for a Casambi Wireless system which allowed us to introduce occupancy detection, new switch locations, group and scene settings.

Products:

Delta Pro, Android, Lina 40, Capri 70, Friston
